

Ropers Caravan World Reaps the Rewards of New Megaman Lighting System

Megaman's Dino LED luminaires have been chosen for the lighting upgrade at Ropers Caravan World, Catterick Bridge, North Yorkshire, replacing old style 6 foot twin light fittings to provide improved light output.

Lamps Used

Dino Integrated LED Batten
Available in;
19.5W, 22.5W, 35W, 41.5W and 63W

Ropers is a well-established, family run company with over 30 years' experience in the leisure industry. The Catterick site has a large indoor showroom displaying new and used caravans and motorhomes along with an array of associated accessories, approved workshops and a newly refurbished visitor's café. The company has recently updated the lighting system within its workshops with Megaman's Dino linear integrated LED battens being the preferred choice of fitting. Supplied by CEF Darlington, Dino is a perfect alternative to old style T5 and T8 fluorescent lights, with the added benefits of high energy savings, low maintenance and increased light output.

Available in 19.5W, 22.5W, 35W, 41.5W and 63W variations, Megaman's Dino fitting is UV resistant and is incorporated within an IK08 corrosion and vandal proof casing, making it ideal for either indoor or outdoor applications. Dino is CE Certified and its tough polycarbonate outer diffuser makes it the perfect choice for use in car parks, walkways, corridors or even harsh internal installations such as commercial kitchens.

Steve Allerston of Ropers commented "We are delighted with the new lighting system, which has really made a positive impact to our workshop. The improved output and quality of light has really enhanced this area making it a more pleasant working environment for our technicians".
